

**NOTE:** This document is part of my Elite Coaching Program.

This SOP can help you integrate AI across your business without needing to hire additional staff, learn technical skills, or build complex systems.

Our approach is implementing AI in a simple, practical way that enhances your existing operations, team, and workflows.

This process is not just about automation but creating an operating system where AI works alongside your team, driving results that feel effortless and sustainable, ultimately leading to growth without more cost or chaos.

And that's exactly what my Elite Coaching Program offers!

Message me on Instagram "ELITE" if you're interested in learning more:

<https://www.instagram.com/danmartell/>

# THE AI OPERATING SYSTEM FOR BUSINESS OWNERS

Roll out AI across every department without hiring or getting technical.

Make this your playbook. It is simple, fast, and real. Copy, paste, ship.

## What you get

- A 4-Part AI Deployment Playbook
- A Master Prompt Template you can edit and use in your team.
- The RCCF Prompt format I use for all my departments.
- Prompts your team can reuse for every department.

## The 4-Part AI Deployment Playbook

## ***Remove Costs • Move Faster • Scale Without Adding Headcount***

Most founders buy AI like it's a shiny object.  
Smart founders use AI like it's a competitive weapon.

If you want to scale without burning cash, this is the exact process I use with 8-figure operators.

# **Step 1: Audit the Business & Expose the Opportunities**

***Goal:*** Pinpoint where AI can immediately reclaim time, eliminate errors, and multiply output.

AI only creates leverage when it's applied to bottlenecks.  
So before you buy a single tool, you need a **brutally honest operational audit**.

## **Start With a Full Process Sweep**

List out every recurring task in each department. Rank them by:

- Time investment
- Money investment

Look for processes that are repetitive, rules-based, or rely on data that already exists.  
Those are your leverage points.

## **Where AI Usually Delivers the Fastest Wins**

### **Sales**

- AI qualifies leads automatically (You can use tool like [Revio](#) to do this in your DM's)
- Predicts which prospects will close
- Auto-summarizes calls into CRM-ready notes

### **Customer Success**

- Automates onboarding
- Create follow-up sequences

- Auto-route customer support tickets

## Operations

- Auto-generate schedules, assign tasks, and predict workload surges
- Inventory automation + demand forecasting
- Internal AI helpdesk answers team questions instantly

## Finance (you can use tools like [Frank](#))

- Scan invoices, categorize expenses, chase missing receipts
- Detect anomalies or fraud patterns
- Predict cash shortages *before* they happen

## HR & Recruiting

- Automated resume filtering and candidate scoring
- AI assistants handling interview scheduling
- Sentiment analysis on employee feedback

## Marketing & Content

- AI-written ads, posts, emails, blogs, video scripts
- Predictive targeting for the highest-converting audiences
- Automated content repurposing + scheduling

## Outcome

Walk away with **3–5 high-ROI opportunities** where AI will instantly save time or money.

# Step 2: Choose the Right Tools & Build the Workflow

*Goal: Integrate AI into your existing systems so it feels seamless—not chaotic.*

AI tools don’t create leverage... **workflows** do.

Here’s how to build them like a pro.

## Recommended Tools by Function

| Function          | Tools                                                                                                                     | What It Enables                             |
|-------------------|---------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| Content Creation  | <a href="#">ChatGPT</a> , <a href="#">Copy.ai</a> , <a href="#">Socialsweep.ai</a>                                        | High-quality content at scale               |
| Automation        | <a href="#">Zapier</a> , <a href="#">Make.com</a> , <a href="#">n8n.io</a>                                                | Connect systems without code                |
| CRM & Sales       | <a href="#">HubSpot.com</a> , <a href="#">GetRevio.com</a> , <a href="#">YourAtlas.com</a> , <a href="#">HireAlli.com</a> | Lead scoring, auto-replies, call summaries  |
| Support & Success | <a href="#">Zendesk AI</a> , <a href="#">Intercom</a> , <a href="#">Chatbase</a> , <a href="#">Buddypro.ai</a>            | 24/7 FAQ bots + routing + customer delivery |
| Analytics         | <a href="#">Precision.co</a> , <a href="#">Hellofrank.ai</a>                                                              | Predictive dashboards & insights            |
| Voice/Video       | <a href="#">ElevenLabs.io</a> , <a href="#">Heygen</a>                                                                    | AI voices, video generation, clipping       |
| Hiring & HR       | <a href="#">Herohire.ai</a> , <a href="#">Trainual.com</a>                                                                | Screening + candidate communication         |

## Map the Workflow

Your AI system should follow this pattern:

1. **Trigger:** A lead opts in or a customer asks a question
2. **Artificial Intelligence:** AI labels, evaluates, drafts, or routes
3. **Automation:** Data moves into CRM, Slack, or task systems
4. **Human in The Loop:** Team reviews only the exceptions

AI should take 80-90% of the repetitive work off your team’s plate.

Outcome

A clean, visual workflow showing exactly where AI steps in and where humans take over.

Step 3: Test, Automate & Measure

Goal: Prove ROI fast and scale only what works.

Most companies over-engineer.  
You're going to **start tiny and scale up only after the data says yes.**

1. Start With One High-Value Process

Examples: lead qualification, appointment setting, content repurposing.  
Document the *before* numbers:

- Hours spent
- Monthly cost
- Output quality

2. Automate the Repetitive Steps

Example system:

Lead fills Typeform → AI drafts personalized email → CRM updates automatically → Slack pings sales rep

3. Weekly Feedback Loops

- Review outputs
- Fix tone issues
- Improve prompts
- Tighten logic

4. Track These Core Metrics

| Metric | Measures |
|--------|----------|
|--------|----------|

|                    |                                              |
|--------------------|----------------------------------------------|
| Time Saved         | Hours eliminated per task                    |
| Cost               | Labor vs automation cost                     |
| Output Consistency | Percentage approved without edits            |
| ROI                | (Savings + Revenue Lift – AI Cost) ÷ AI Cost |

5. Scale What Works

Once a workflow proves ROI, replicate it in other departments.

Outcome

A battle-tested AI system that runs reliably, improves over time, and prints operational efficiency.

Step 4: Scale Your AI Deployment

*Goal: Turn AI from a tool into a company-wide operating system.*

This is how you go from “We’re trying AI” to “We’re an AI-driven company.”

1. Standardize the Wins

Turn successful workflows into SOPs.  
Document in Notion, Google Drive, or Asana.  
This makes AI scalable.

2. Build a Team That Thinks in Automations

- Run monthly AI “Show & Tell” sessions
- Assign an AI Champion in each department
- Encourage bottom-up automation ideas

3. Measure Quarterly Gains & Reinvest

Track savings, output gains, and speed improvements.  
Then reinvest those gains into more AI automation.

AI is a flywheel - keep feeding it.

# Ready to Deploy Business Prompts

Want AI to work like a top hire in every part of your business?

Start with your Master Prompt - it tells ChatGPT exactly how to show up for you.

Paste it once per chat and your voice, style, and priorities stay locked in.

Then use the RCCF format to guide any task with role, context, command, and format.

From there, this library gives you ready-to-run prompts for Marketing, Sales, Success, Product, etc.

Each one is built to save time, cut waste, and drive revenue today.

You get scripts, outlines, angles, call plans, playbooks, specs, tests, releases, and more.

No fluff. No buzzwords. Just tools that help you act fast and act smart.

Run these prompts to scale your business today.

## Company Master Prompt Template

Paste this once per chat. Keep it at the top of your project chat.

"Hey ChatGPT, here is how to show up for me every time:

My name is [NAME]. I run [COMPANY], a [BUSINESS TYPE] that sells [OFFER] to [AUDIENCE]. I am an entrepreneur and operator. I like fast, clear answers that help me act today.

Voice and style: energetic, motivational, casual. Short sentences. Punchy lines. Conversational flow. Keep it PG. Use American spelling. Use simple words. Grade 5 to 7 reading level.

Hooks: use questions to pull me in. Highlight key ideas with caps, bold, or italics. End sections on a strong line that pushes action.

Analogies: use restaurants, laundromats, grocery lines, airplanes, and sports teams when helpful.

Formatting: lots of line breaks. Numbered steps. Bullets. Tables when we compare options. Straight quotes only. No em dashes.

My priorities: grow revenue, cut waste, free up time. I value leverage, speed, and clarity. I prefer concrete examples over theory.

When you write for me: give me 3 options when choosing. Push back if my ask is weak. Offer a better path and say why.

Constraints: avoid buzzwords. Avoid vague claims. If a claim needs proof, cite a simple number or show a test to run.

QA: before you finish, do a 3 point quality check. 1) Is it simple. 2) Is it useful today. 3) Is the next step clear.

If info is missing, ask me up to 3 short questions. If you have enough to act, act. Do not stall.

Remember this style for future chats. If you are unsure, ask clarifying questions first."

## RCCF Prompt Format:

- Role: [ROLE]
- Context: [GOAL]. Audience: [AUDIENCE]. Inputs: [NUMBERS/LINKS]. Constraints: [RULES].
- Command: [ACTION]. Give 3 options and a better path if you see one.
- Format: [OUTPUT FORMAT]. End with a CTA. Run the 3-point QA.

## MARKETING PROMPTS TO USE

### Setup

- Create a shared Project named "Marketing".
- Paste the Master Prompt.
- Edit the variables to match your business.
- Start using prompts below to generate outputs.

### Prompts to Use

1. Short-Form Script Generator (Point • Story • Lesson)
  - a. Role: Act as a short-form video coach.
  - b. Context: Topic is [TOPIC]. Audience is [AUDIENCE]. Desired action is [CTA\_LINK OR DM].
  - c. Command: Write 3 scripts using PSL. Open with a sharp pain, add a true story, end with 1 actionable lesson and CTA.
  - d. Format: For each script: Hook (1 line), Story (3–5 lines), Lesson (3 steps).
2. YouTube Long-Form Outline (Open Loops + Proof)
  - a. Role: Act as a YouTube showrunner.
  - b. Context: Offer [OFFER]. Avatar [AVATAR]. Core promise [PROMISE].
  - c. Command: Outline a 10–12 minute video with a cold open hook, 3 loops, proof beats, and a soft DM CTA. Include b-roll ideas.
  - d. Format: Sections: Cold Open, Big Promise, Loop 1, Loop 2, Loop 3, Proof Stack, CTA, End Card.
3. Hook Bank from Customer Language
  - a. Role: Act as a voice-of-customer analyst.
  - b. Context: Inputs: call notes, reviews, comments at [LINKS].
  - c. Command: Extract 25 hooks in the customer's own words. Tag each hook to a pain or desire.
  - d. Format: Table with Hook, Pain/Desire, Source link, Use cases (Short, Email, Ad).
4. Ad Angles and Variations
  - a. Role: Act as a media buyer.
  - b. Context: Platform [META or YOUTUBE or GOOGLE]. Audience [AUDIENCE]. Budget [BUDGET].
  - c. Command: Create 10 angles. Each angle includes 3 copy lines and 1 visual idea. Keep claims grounded in proof.
  - d. Format: Table: Angle name, Lines (1–2 sentences each), Visual idea, Proof note.
5. Creator-CEO Newsletter (Story • Lesson • Offer)
  - a. Role: Act as a newsletter editor.
  - b. Context: List size [SIZE]. Topic [TOPIC]. Offer [OFFER]. Voice [TONE].
  - c. Command: Write a concise email using a personal story, one lesson, one CTA.
  - d. Format: Subject, Preview, Body (Story, Lesson, CTA link).

# SALES PROMPTS TO USE

## Setup

- Create a shared Project named “Sales”.
- Paste the Master Prompt.
- Edit the variables to match your business.
- Start using prompts below to generate outputs.

## Prompts to Use

1. Speed-to-Lead Callback Script
  - a. Role: Act as a sales responder.
  - b. Context: Offer [OFFER]. ICP [ICP]. Qual rules [QUAL\_RULES]. Tool [VOICE\_AGENT or DIALER].
  - c. Command: Write a fast callback script that confirms need, qualifies lightly, and sets the next step.
  - d. Format: Open (10s), Qual (3 points), Close (next step + time), Notes (CRM fields).
2. Sell-By-Chat DM Starters
  - a. Role: Act as a social seller.
  - b. Context: Platform [INSTAGRAM/LINKEDIN]. Audience [AUDIENCE]. Proof [PROOF\_LINKS].
  - c. Command: Write 10 human DM openers that invite a reply without pressure; include light personalization tokens. Example: Hey [NAME], noticed you're into cars as well. Wondering, are you here for the vids are looking to grow your business?
  - d. Format: Bullets with Token, Opener, Follow-up nudge, “If no reply” line.
3. Discovery Call Prep
  - a. Role: Act as a sales coach.
  - b. Context: Prospect [NAME], company [COMPANY], pains [PAIN1/PAIN2], desired outcome [OUTCOME].
  - c. Command: Draft a short discovery plan that confirms goals, budget fit, and decision process.
  - d. Format: 2-min opener, 5 discovery questions, success criteria, red-flag checklist.
4. Objection Handling Playbook
  - a. Role: Act as an objection-handling strategist.
  - b. Context: Segment [SEGMENT]. Common objection “[OBJECTION]”. Proof [PROOF\_ASSET].
  - c. Command: Create 3 talk tracks using different frames (data, story, future-pace) that stay empathetic and honest.
  - d. Format: Track name, When to use, Script (4–6 lines), Optional proof.

# CUSTOMER SUCCESS PROMPTS TO USE

## Setup

- Create a shared Project named “Customer Success”.
- Paste the Master Prompt.
- Edit the variables to match your business.
- Start using prompts below to generate outputs.

## Prompts to Use

1. Day-0 Quick-Start Plan
  - a. Role: Act as an onboarding lead.
  - b. Context: Account [ACCOUNT]. Goal [VALUE]. Deadline [DATE]. Tier [TIER].
  - c. Command: Build a simple plan that gets one meaningful win in week one.
  - d. Format: Checklist (3–5 steps), Owners, Acceptance criteria, Welcome note.
2. Risk Radar
  - a. Role: Act as a retention analyst.

- b. Context: Usage [USAGE SIGNALS], tickets [TICKETS], sentiment [NOTES], health rules [HEALTH\_SCORE\_RULES].
  - c. Command: Score risk and propose save plays that are specific and time-bound.
  - d. Format: Table with Risk level, Signal, Save play, Owner, Due date.
- 3. QBR Outline
  - a. Role: Act as a CSM.
  - b. Context: Account [ACCOUNT]. Last 90-day outcomes [METRICS]. Upcoming goals [GOALS].
  - c. Command: Draft a QBR flow that highlights wins, insights, and a 90-day plan.
  - d. Format: Sections: Wins, Insights, Roadmap, Asks, Next steps.
- 4. Expansion Moment Script
  - a. Role: Act as a success-led seller.
  - b. Context: Milestone hit [MILESTONE]. Relevant offer [UPSELL].
  - c. Command: Create a brief outreach that anchors on earned results and proposes a next step.
  - d. Format: 3-line message + calendar link line.

## PRODUCT PROMPTS TO USE

### Setup

- Create a shared Project named “Product”.
- Paste the Master Prompt.
- Edit the variables to match your business.
- Start using prompts below to generate outputs.

### Prompts to Use

1. Opportunity Ranking
  - a. Role: Act as a product strategist.
  - b. Context: Candidate ideas [LIST]. Constraints [RESOURCES]. Strategy [THEMES/OKRs].
  - c. Command: Rank opportunities by impact, confidence, and effort with a one-line rationale.
  - d. Format: Table: Idea, Impact, Confidence, Effort, Rationale.
2. One-Page Product Management Sheet
  - a. Role: Act as a product manager.
  - b. Context: Problem [PROBLEM]. Users [USERS]. Success metric [METRIC].
  - c. Command: Write a one-page spec that is problem-first and minimal.
  - d. Format: Problem, Users, Scope, User stories, Acceptance, Risks, Success metric.
3. Experiment Design
  - a. Role: Act as a growth PM.
  - b. Context: Hypothesis [HYPOTHESIS], sample [SEGMENT], constraint [BUDGET/TIME].
  - c. Command: Design a simple test with pass/fail and decision rule.
  - d. Format: Hypothesis, Metric, Threshold, Steps, Decision rule, Next action.
4. Voice-of-Customer Digest
  - a. Role: Act as an insights analyst.
  - b. Context: Sources [CALLS/REVIEWS/TICKETS LINKS].
  - c. Command: Summarize top 5 themes with quotes and suggested product actions.
  - d. Format: Table: Theme, Quote, Source, Action idea.
5. Release Notes (Plain English)
  - a. Role: Act as a release editor.
  - b. Context: Feature [FEATURE]. Benefits [BENEFITS]. Affected users [SEGMENTS].
  - c. Command: Write short notes that explain what changed and why it matters.
  - d. Format: Title, What’s new, Why it matters, How to use it, Links.

## ENGINEERING PROMPTS TO USE

### Setup

- Create a shared Project named “Engineering”.

- Paste the Master Prompt.
- Edit the variables to match your business.
- Start using prompts below to generate outputs.

## Prompts to Use

1. PR Review Summary
  - a. Role: Act as a senior reviewer.
  - b. Context: Repo [REPO]. Stack [STACK]. PR title [TITLE]. Diff notes [NOTES].
  - c. Command: Produce a concise review that surfaces risks, tests to add, and merge readiness.
  - d. Format: Risks, Suggestions, Tests, Merge checklist.
2. Bug Triage
  - a. Role: Act as a triage lead.
  - b. Context: Steps to reproduce [STEPS], expected [EXPECTED], actual [ACTUAL], severity [SEV].
  - c. Command: Draft reproducible steps, likely root causes, and a minimal fix plan.
  - d. Format: Repro, Suspects, Fix plan, Acceptance test.
3. Doc Update
  - a. Role: Act as a docs scribe.
  - b. Context: Feature [FEATURE], entry points [FILES/LINKS].
  - c. Command: Update README/guide with setup, usage, and examples.
  - d. Format: Section headings with short instructions and example blocks.
4. Test Plan Scaffold
  - a. Role: Act as a QA lead.
  - b. Context: Component [COMPONENT], behavior [BEHAVIOR], edge cases [EDGES].
  - c. Command: Outline a pragmatic test plan that prevents regressions.
  - d. Format: Unit cases, Integration cases, Edge cases, Data/fixtures.
5. Release Checklist
  - a. Role: Act as a release manager.
  - b. Context: Version [VERSION], envs [ENVS], CI/CD [TOOL].
  - c. Command: Provide a pre-release checklist that is safe and fast.
  - d. Format: Pre-checks, Steps, Rollback notes, Owner.

## OPERATIONS PROMPTS TO USE

### Setup

- Create a shared Project named “Ops & Finance Implementation”.
- Paste the Master Prompt.
- Edit the variables to match your business.
- Start using prompts below to generate outputs.

## Prompts to Use

1. Weekly KPI Pack
  - a. Role: Act as an operator-analyst.
  - b. Context: Sources [CRM/ADS/BILLING]. Targets [TARGETS].
  - c. Command: Create a one-page scorecard with trends and red flags.
  - d. Format: Table: KPI, Current, Trend, Target, Note, Action.
2. Month-End Close Checklist
  - a. Role: Act as a finance ops lead.
  - b. Context: Accounts [ACCOUNTS], deadlines [DATES], tool [ACCOUNTING\_TOOL].
  - c. Command: Draft a close checklist with dependencies and controls.
  - d. Format: Steps, Owner, Due date, Control, Evidence link.
3. Daily Cash & Anomalies
  - a. Role: Act as a finance sentinel.
  - b. Context: Data [BANKS/STRIPE], thresholds [ALERT\_RULES].
  - c. Command: Generate a daily summary with anomalies and a simple next action.
  - d. Format: Cash by account, In/Out, Anomalies, Action.

# FINAL MESSAGE

Pick **one** department.

Deploy AI **today**.

Paste the **Master** Prompt.

Run one of the **Role, Context, Command & Format** Prompts.

And ship **one** asset today.

If you want more support **implementing** AI in your business...

and **scaling** past \$10M+

[apply for coaching here](#) and I'll see if I can help.

DM

P.S.

If you're looking for the tools I use to run my companies, here's what I recommend:
